MODERN DESIGN

ML System offers a fully customizable, intelligent, bus stop of the future. Made made of aluminum, the lightweight and durable structure fits perfectly modern architecture and the use of high-quality glass guarantees safety and enables the implementation of many technological innovations.

ADAPTED TO THE NEEDS

The intelligent bus shelters offered by ML System can be configured in the number of rear glass modules, adjusting their dimensions to the space and number of passengers in the agglomeration node, and the technologies used can be flexibly adapted to a given place. The shelter may be equipped with:

- photovoltaic roofing
- variable message displays
- air conditioning
- heating
- lighting
- motion detection
- monitoring
- wi - fi
- bench heating
- heated rear walls
- highly translucent overrun windows
- illuminated engraving
- ceramic print
- induction loops for the deaf
- full remote control via Scada ML
- AED defibrillator
- energy independence (off-grid)

VARIABLE CONTENT DISPLAY

Imagine you live in a city with communication and the flow of public information work like clockwork. Sitting down at the stop on a cold day, you enjoy the heated seat and WiFi access, and you can charge your phone while resting on the bench. You are not late anywhere, you do not wait long for information on public transport are displayed on a regular basis in generally accessible places.

Sounds like a dream? For ML System, it is a reality.

BENEFITS

By using ML System bus shelters, we gain:

- clean energy production
- ecological solutions
- saving
- remote supervision
- configurability
- aesthetic appearance
- automation of settings depending on the weather
