

We specialise in designing and implementing integrated photovoltaic cell systems (PV systems), including integrated buildings (BPV), used to obtain electricity from solar radiation.

We implement our solutions via:

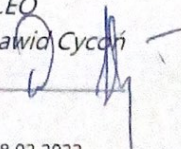

- innovative and sustainable development;
- an effective and continuously improved management system based on ISO 9001, ISO 14001, ISO 45001, and ISO 5001;
- responsible behaviour towards the environment;
- prioritising safety, human health and the environment.

We undertake to:

- comply with applicable laws and other requirements governing the Company's activity;
- ensure safe and hygienic working conditions in order to eliminate hazards and reduce the risk of accidents and occupational diseases;
- ensure consultation and participation of employees in building safe working conditions and raising the awareness of rational energy use;
- prevent accidents at work, occupational diseases, industrial accidents, identify and eliminate hazards in the working environment, as well as take action in the field of health protection;
- promote professional development and create favourable conditions facilitating the development of qualifications of employees;
- protect the environment, minimise harmful environmental impact and build ecological awareness among employees and contractors;
- manage opportunities and threats in order to achieve optimal strategic benefits and necessary energy goals;
- offer top quality products and services to customers while guaranteeing adequate communication;
- make responsible and efficient use of raw materials, energy, purchased products, and services in order to minimise the generated waste and emissions of gases;
- continuously improve the effectiveness of the IMS and the energy performance in all areas of the company's activity;

On behalf of the Company's Management Board, I undertake to make every effort to ensure the availability of information and all resources to meet the assigned objectives and tasks.

CEO
Dawid Cycań

WE ARE CHANGING THE WORLD FOR FUTURE GENERATIONS
