

Photonic roof

PHOTOVOLTAIC CERAMIC ROOF TILES

One PRODUCT *One* ASSEMBLY *Two* FUNCTIONS

DURABILITY

PhotonRoof roof tiles are resistant to atmospheric conditions and aggressive environmental factors which guarantees durability for many years.

HUE

Thanks to the use of a ceramic layer embedded in the glass during the tempering process, the tile retains the traditional color of the ceramics, matching any space.

Due to the use of noble materials in the production process, the color shades of individual production batches may vary slightly.

UNIQUE SURFACE

It ensures perfect reproduction of the roughness, thickness and surface structure of standard ceramic products.

Classic ceramic tile

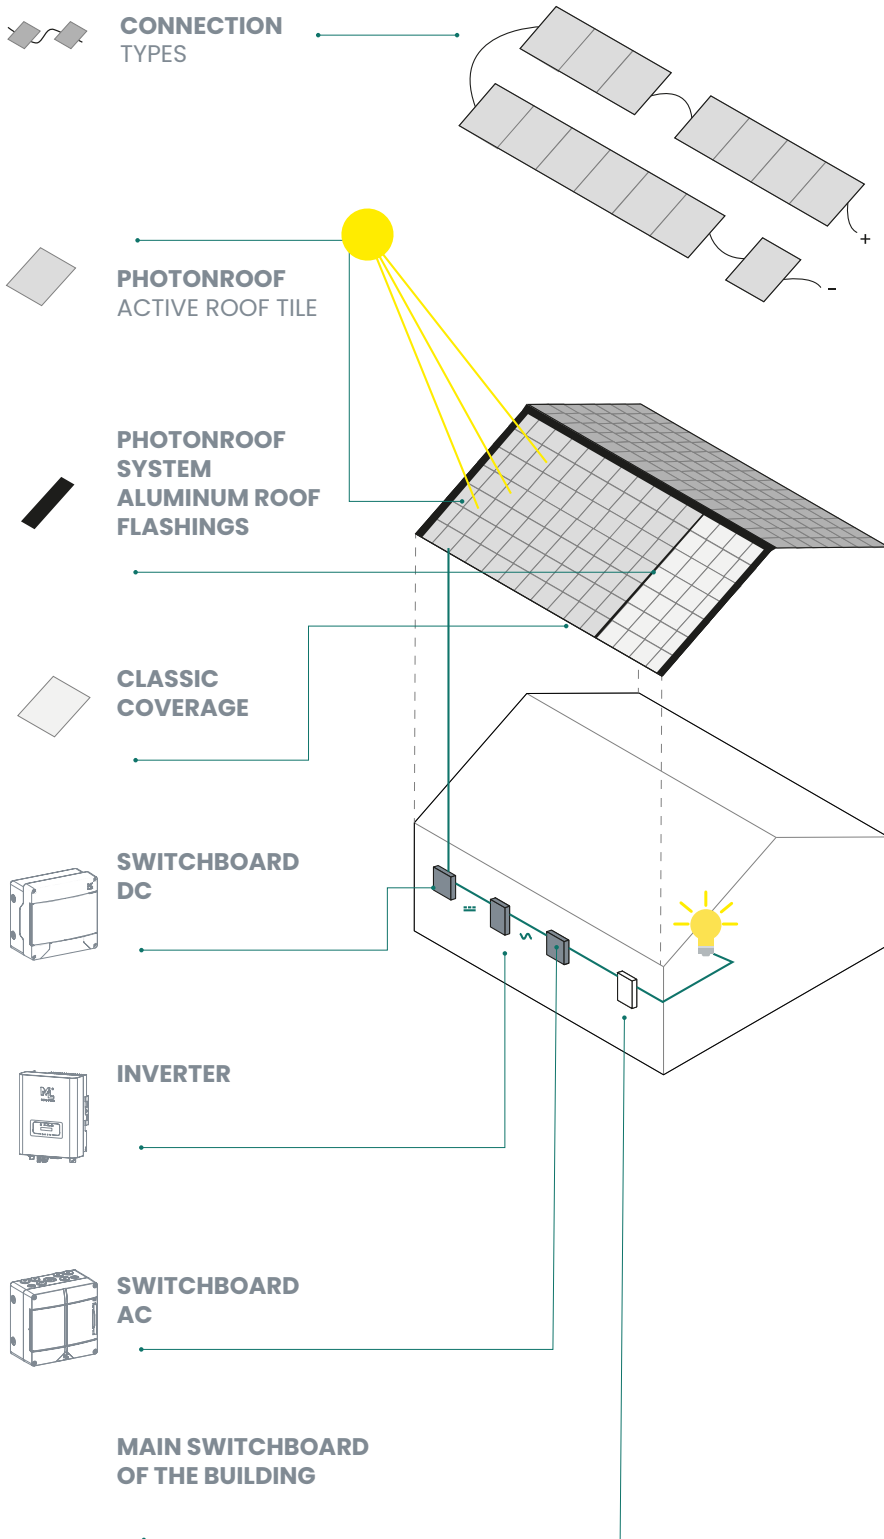

Photovoltaic roof tile
PhotonRoof

Has a positive opinion
of monument conservators.

TIGHTNESS

Technology refined to perfection, attention to detail and a dedicated seal system ensure the tightness of PhotonRoof roof coverings.

All elements necessary for installation are available as a complete system solution

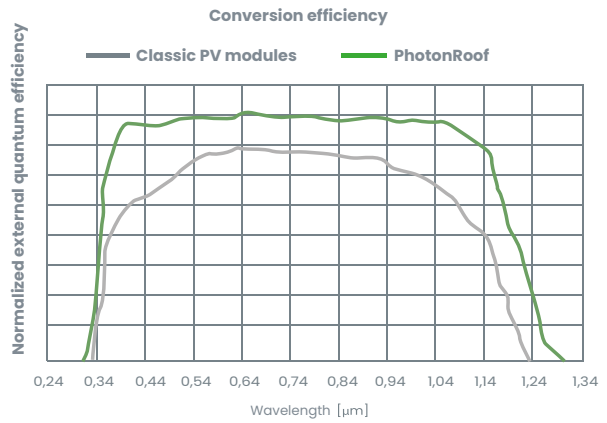

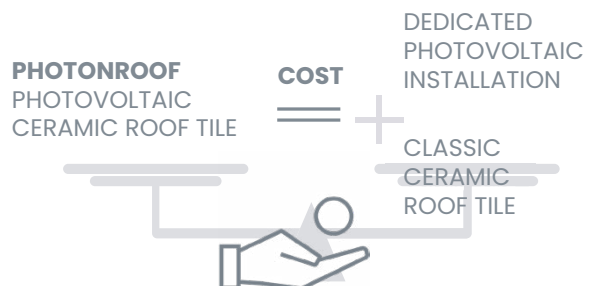

+30% MORE ENERGY

compared to classic PV modules

PhotonRoof photovoltaic roof tiles produce up to 30% more green energy than a classic photovoltaic installation of the same power.

A set of different sizes of roof tiles allows you to better fill the roof surface. The small dimensions of individual elements result in smaller losses if some of them are shaded.

MEETS BUILDING STANDARDS REGARDING FIRE PROTECTION CLASSIFICATION

HAIL RESISTANCE 75 mm / 140 km/h

- ✓ The PhotonRoof photovoltaic roof tile is approved for use as a building material
- ✓ The PhotonRoof photovoltaic roof tile is approved for use as a photovoltaic module
- ✓ Tested in aggressive environments (ammonia, salt)
- ✓ The photovoltaic roof tile is classified as NRO - Fire Retardant Material (which qualifies it for use on roofs with large surfaces above 1,000 m2)
- ✓ PhotonRoof has the European classification for BROOF roofing (t1)

PHOTONROOF ROOF TILES SYSTEMICALLY COMBINE WITH ANY TYPE OF ROOF COVERING

ceramic **roof tile**

steel **roof tile**

sheet **metal with a seam**

trapezoidal **metal sheet**

ACTIVE ROOF TILE

producing green energy

PASSIVE ROOF TILE

installed in shaded places

PASSIVE HALF ROOF TILE

allows the slope to be laid in a staggered arrangement

LEFT AND RIGHT ACTIVE ROOF TILE

for an aesthetic finish

BATTENS SPACING
340-360 MM

MODULARITY

roof tiles are available in various module formats (active and passive), ensuring maximum use of the roof surface and optimization of power and costs.

100 YEARS
DURABILITY

SYSTEM HOLES

installation identical to that of classic ceramic roof tiles

INTUITIVE CONNECTION

using a connector

30 YEARS
WARRANTY *

SYSTEM COMPLETENESS

PhotonRoof is a complete solution that ensures easy selection of elements.

ML System offers consultations on the professional selection of system elements.

*all components from ML System provide a warranty and trouble-free use, monitored by the ML SCADA system

Carport PV

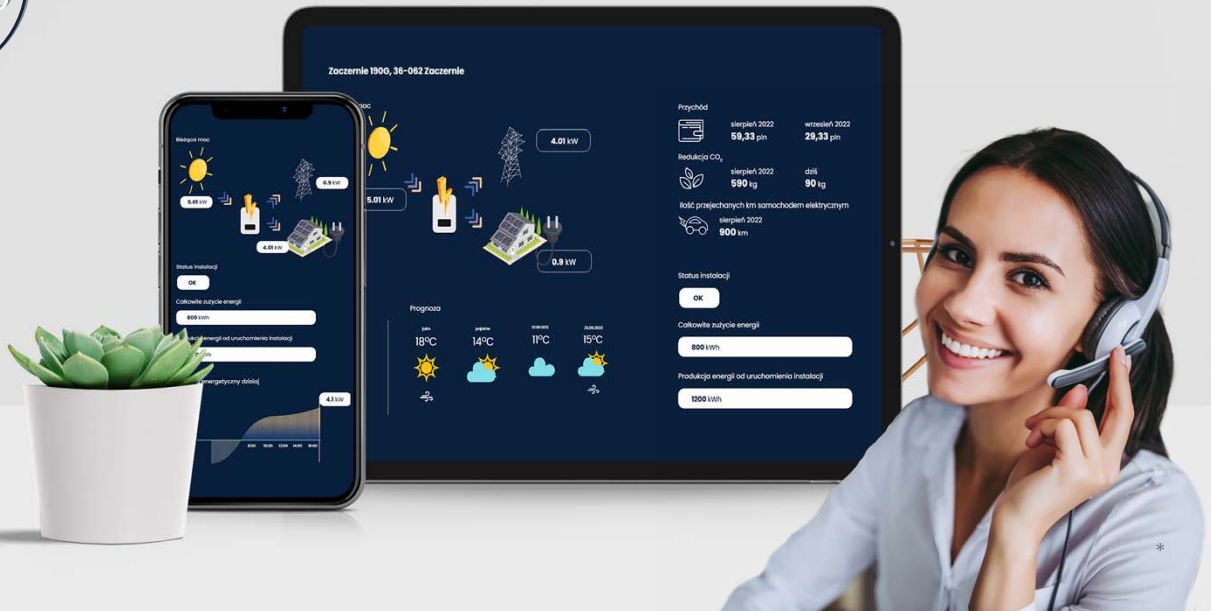

ML System offers photovoltaic parking shelters adapted to the needs of powering electric and plug-in hybrid cars. The green energy produced also allows you to power other electric vehicles, such as bicycles and scooters. Surplus power can be fed into the grid or accumulated in an energy storage facility. Available as complete assembly kits.

Pergola PV

The PERGOLA photovoltaic terrace roof is a combination of protection against atmospheric factors such as solar radiation, rain or snow, integrated with solar modules, the roof produces environmentally friendly green energy and allows you to reduce your home electricity bills. They improve comfort by providing shade, tightness and protection against rain. Available as complete assembly kits.

ML SCADA

is an original program for managing energy-producing installations.

Management function

The built-in function will decide for you when it is most profitable to use the manufactured one energy and when to return it to the grid or store it. With ML SCADA you will see your energy yields in real time.

ML System, as a responsible manufacturer, offers its customers a professional service in the field of inspection, maintenance and repair of ML System products.

The system can control other installations in the house, such as air conditioning, heating, monitoring or intelligent lighting. The responsiveness of the system ensures the ability to control the power of air conditioning or heating depending on the current installation yield.

ML SCADA not only takes care of your finances, but also about the convenience of use - the application is also available for mobile devices.

The application will remind you about the inspection date or notify you about any irregularities in the operation of the installation.

Photovoltaic roof tile it's more than just a roof – it's safety and energy independence for many years.

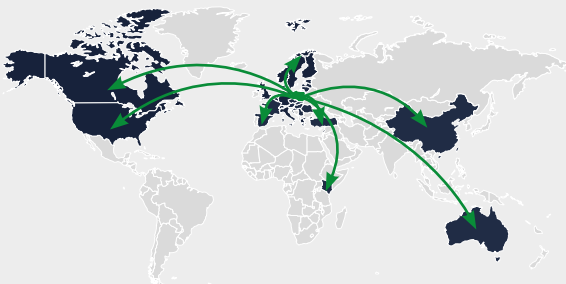

Photonroof

Production plant with an area of 40,000 m², Zaczernie, Poland.
